Building Climate Resilient and Sustainable Sanitation Infrastructure through Innovative Technologies Towards Circular Economy

DBSA - 2nd Annual Infrastructure Research
Colloquium
9 April 2024

science & innovation

Department:
Science and Innovation
REPUBLIC OF SOUTH AFRICA

Sanitation activities drive climate change

- GHG emissions are associated with all stages of the sanitation value chain and contributes to 2-6% of global methane emissions and 1-3% of global nitrous oxide emissions
- Thus, increased access to sanitation could be linked to increased GHG emissions, unless the prevailing sanitation paradigm shifts to climate smart sanitation solutions

Impact of climate change on sanitation

EXTREME HEAT

WATER SCARCITY & DROUGHT

INCREASED PRECIPITATION FLOODING & EXTREME WEATHER

- Reduced efficiency of biological wastewater treatments
- Increased odours from onsite sanitation systems
- Increased corrosion of sewers
- Increased evaporation in water bodies

- Negatively affects water reliant sanitation systems (flush toilets, sewerage, treatment)
- Increased corrosion and clogging of sewers
- Concentrated wastewater and reduced capacity of receiving water bodies to dilute wastewater

- Damage to sanitation infrastructure
- Damage to auxiliary infrastructure which sanitation systems rely on
- Flooding of pit toilets, sewers, septic tanks causing spillage and contamination
- Treatment plants receive flows that exceed their design capacities, resulting in flows bypassing to water bodies and surroundings

Impact of climate change on sanitation...

On a recent visit to Durban, South Africa, I met a grandmother whose community had been hit hard by flooding. Already reeling from disaster, she woke up one day to find her toilet had been washed away. With the closest facilities now one kilometre away — too far to walk — she was left with no option but to go in the open. (Doulaye Kone, Deputy Director WASH, Bill and Melinda Gates Foundation)

Poor climate adaptation, outdated infrastructure served as catalysts for KZN floods

Perfect Storm: Durban floods, climate change and coastal resilience

Shifting towards climate resilient sanitation

NDP2030, DWS 2016 National Master Plan and DTIC IPAP 2017 supports the shift towards waterless, off-grid sanitation systems and water recycling systems

| Plan | Objective | Target |
|--|--|--------------------|
| <p>National Development Plan</p> | <ul style="list-style-type: none"> • Use of technologies that minimises use of water resources, encourages recycling and reuse • Achieve universal sustainable sanitation provision | <p>2030</p> |
| <p>DWS National Water and Sanitation Master Plan (2016)</p> | <ul style="list-style-type: none"> • Achieve universal sustainable sanitation provision • Develop, demonstrate and validate appropriate alternative waterless and off grid sanitation solutions • Develop and demonstrate appropriate wastewater technologies for cost effectiveness, energy efficiency and beneficiation | <p>2025</p> |
| <p>Industrial Policy Action Plan (2017)</p> | <ul style="list-style-type: none"> • Development of off-grid sanitation technologies that will lower water requirements for sanitation, enabling reallocation to alternative needs and economic sectors and more effective service delivery in rural, peri-urban and water-scarce areas | <p>2020</p> |

Elements of climate resilient sanitation systems

Institutions, governance, and services

- Supportive policies and regulations
- Clear institutional responsibilities and flexible management and service delivery arrangements
- Risk and vulnerability informed planning and decision making
- Maintaining capacity for continual adaptation through M&E and learning
- Integrated action on the whole water cycle to protect services, environment and public health

Financing

Sustainable and responsive financing for both preventive measures and disaster responses

User and societal engagement

Creative, strength-based user and societal engagement and awareness

Infrastructure

Robust and repairable sanitation infrastructure options

OUR FOCUS

Source: UTS-ISF, UI and UNICEF (2021). *Climate resilient urban sanitation in Indonesia: Hazards, impacts and responses in four cities*. Institute for Sustainable Futures, University of Technology Sydney: Sydney

Climate First Framework Introduction

- ❑ Systematic approach on how climate-related hazards can affect a sanitation technology and how the risks of these hazards can be reduced through technology design
- ❑ Identifies key climatic risks to manage, improve technology design, and consider relative merits of different technologies
- ❑ Applicable for onsite/decentralised containment and treatment technologies
- ❑ Can be used by anyone engaged in the development or implementation of sanitation technologies
- ❑ Developed by Institute of Sustainable Futures University of Technology Sydney (ISF-UTS) for the Bill and Melinda Gates Foundation (BMGF)

Rating of NSS using Climate First Framework

- 1 Scoping
- 2 Hazardous events & trends
- 3 Hazards
- 4 Design features
- 5 Overall resilience

| Category | Resilience design feature |
|--|---|
| A. Avoiding exposure to hazards | 1. Raising |
| | 2. Burying |
| | 3. Portability |
| | 4. No/low Inputs |
| B. Withstanding exposure to hazards | 5. Armouring and strengthening |
| | 6. Oversizing |
| | 7. Shapes that distribute pressure |
| | 8. Circumvention |
| | 9. Sealing and Barriers |
| C. Enabling flexibility | 10. Adaptability |
| | 11. Modular design |
| | 12. Platform design |
| | 13. Redundancy and diversity |
| | 14. Signalling |
| D. Containing failures | 15. Frangibility |
| | 16. Fail-operational |
| | 17. Decentralisation |
| E. Limiting consequences of complete failure | 18. Safe disposal |
| | 19. Reusable materials |
| | 20. Fail-silence |
| | 21. Repair speed |
| | 22. Accessibility for rapid flaw detection and repair |
| F. Providing benefits beyond sanitation technology resilience | 23. Reciprocity |
| | 24. Hybridising |
| | 25. Transformative capacity |

NSS Systems within WRC SASTEP

> Recovers and re-uses water (closed loop system)

> Can be set up off-grid set-up (no connection to water, sewer and electricity)

> Provides full flushing sanitation solution

> No need reticulation infrastructure

Clearwater

| Overall Resilience Rating | | High (17/25) | High (19/25) | High (17/25) | High (16/25) |

Overall Climate Resilience Rating of NSS

- ❑ The NSS technologies had **64 - 76%** (16-19 out of 25) climate resilient design features in the climate resilient framework developed by UTS.
- ❑ Each system had at least one resilient design feature under all the 6 climate resilience design categories and thus all the technologies were rated **high** in terms of overall resilience.
- ❑ All the NSS systems scored 33% in the resilient design category of **containing structures** which should be the areas of optimization and improvements in the future by designers and implementers.

resilience

Judging overall resilience

Institutional and governance support

- ❑ DWS policy and regulatory support for NSS

Green Drop Regulation being amended to include NSS

The image shows the cover of a document titled "Proposed Amendments to the Green Drop Certification Criteria for the Regulation of Non-Sewered Sanitation Services in South Africa". The cover features a blue and white color scheme with a background image of a water tap. At the top, the title is written in white text. Below the title, a blue banner contains the slogan "WATER IS LIFE - SANITATION IS DIGNITY". The bottom section of the cover includes the logo of the Department of Water and Sanitation, Republic of South Africa, and the logo of the National Development Plan (NDP) 2030.

- ❑ Off-grid policy/by-laws for NSS in municipalities

ToR initiated for developing a set of model bylaws for the implementation of off grid, decentralised and non-sewered sanitation solutions in municipalities

OPEN AND SPECIAL CALLS

Development of Model by-laws for off grid, decentralized and non-sewered sanitation solutions in Municipalities

Financing

- ❑ WRC, BMGF & WPO developed framework to set up NSS sub-programme within the Water Partnerships Office (WPO)
- ❑ Supported by DWS and SALGA
- ❑ BMGF & WPO signed an agreement to support NSS Programme with feasibility assessments and structuring finance for WSAs, DBE, Water Boards interested in NSS

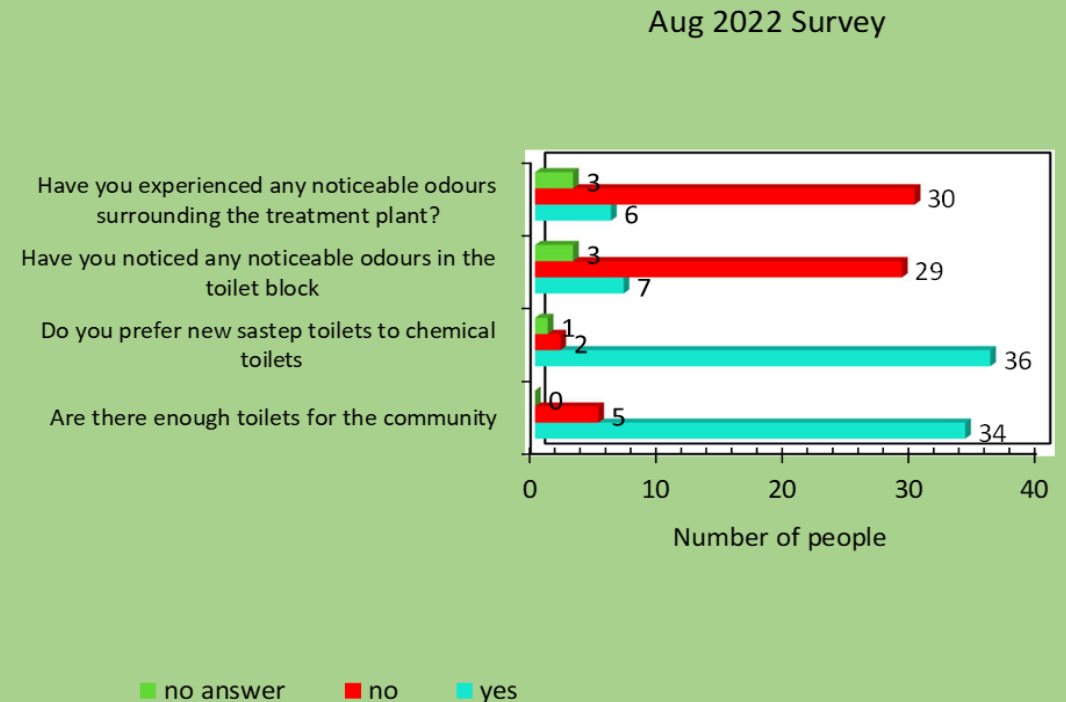

| OFF-GRID SANITATION | | DBSA |
|----------------------------------|---|------|
| NON-SEWERED SANITATION PROGRAMME | | |
| Initiative | <ul style="list-style-type: none"> • Off-grid / non-sewered sanitation provision to communities | |
| Description | <ul style="list-style-type: none"> • Provision of alternative and innovative sanitation technology in support of the Sanitation Economy ... toilet economy + circular sanitation economy + smart sanitation economy • A transformational vision for business engagement in sanitation in SA | |
| Potential developmental impact | <ul style="list-style-type: none"> • Sanitation solutions for climate change • Sanitation solutions for water security • Sanitation solutions for food security • Sanitation solutions for the health sector • Sanitation solutions for female health and empowerment • Sanitation solutions for smart city infrastructure • Small business development • Job creation – women and youth employment • Opportunity for Government to deliver sanitation services faster & at a lower cost to approx. 2.8 million households | |
| Partners | <ul style="list-style-type: none"> • COGTA & DHSWS • WRC • SASTEP • Bill & Melinda Gates Foundation | |

Societal and user engagements

- Everything
- They are clean, comfortable, and technologically advanced
- Easy to use and they are safe

- 2 User experience survey conducted (beginning and towards the end)
- NSS widely accepted by the users in current demo sites

Final thoughts

The selection of appropriate sanitation technologies should also be based on their vulnerability and adaptability to different climate scenarios apart from technical, financial, economic, social and environmental considerations. The selected sanitation technologies should have low vulnerability and high adaptability to climate change.

Existing infrastructure should be assessed for climate change resilience and robustness and be modified to reduce the adverse impacts of climate related events where possible.

WRC is evaluating and demonstrating a number of technologies towards climate resilient and resource efficient sanitation value chain with each at advanced technology readiness levels.

Most of these technologies incorporates both mitigative and adaptive aspects of climate change and could be considered when selecting sanitation systems that considers future climatic projections to ensure sustainable sanitation systems in the mist of climate change.

Final thoughts continued...

**CLIMATE-RESILIENT WATER AND SANITATION
IS WORTH EVERY DOLLAR**

\$1 = **\$21**
SPENT ON WATER SERVICES RESILIENCE IN RETURN

\$1 = **\$62**
SPENT ON WATER FLOOD RESILIENT UPGRADES = SAVED IN FLOOD RESTORATION COSTS

THANK YOU
