PART E

TERMS OF REFERENCE & PROJECT BRIEF

1. INTRODUCTION

This document sets out the Terms of Reference ("ToR") for the appointment of a suitably qualified and experienced service provider to coordinate the development of the Private Sector Energy Efficiency Programme Phase 2 (PSEEP2) CEO Endorsement document and associated documentation that will align with the requirements of the the Global Environment Facility (GEF) and DBSA. The CEO Endorsement document is designed to provide a comprehensive description of the PSEEP2 programme, its impact, implementation plan, project budget and its alignment with the GEF objectives.

South Africa is historically a resource-based economy with a low-cost carbon-intensive energy baseload. While South Africa has made progress in energy efficiency ("EE") and established a comprehensive energy policy, the country has not realised substantial efficiency gains demonstrated by comparable emerging economies. Energy efficiency adoption has primarily been geared and designed for large-scale projects in sectors and technologies considered commercially viable and easily implementable. Demand for small scale projects, development of new energy efficiency products and the stimulation of demand for small-scale energy efficiency projects remain low due to the high risk associated with such projects, low return-on-effort, and inadequate collateral. Small to medium-sized enterprises (SMEs), which constitute the majority of businesses, generate a quarter of private sector jobs and contribute significantly to the Gross Domestic Product (GDP), have particularly struggled to access sufficient financial support.

Financial and technical interventions are needed to catalyse and sustain activity to i) stimulate demand, develop project pipelines and build capacity in SMEs and financial institutions and ii) to provide critical access to finance for SMEs funding energy efficiency and to demonstrate viability of supporting relatively small, standardised energy efficiency interventions through standardised financial products offered by commercial financial institutions. The objective of the proposed programme is to bridge the gap and enhance financial access to SMEs to implement EE programmes that will reduce their energy consumption and carbon footprint. The proposed project will comprise of three complementary components delivered in parallel:

- Component 1: USD 1.9 million grant funded Technical Assistance (TA);
- Component 2: USD 17.7 million Credit Risk Guarantee Facility (CRG) {USD 12.7 million first loss from GEF NGI and a USD 5 million second loss CRG from DBSA};

 Component 3: USD 400 million loan investment and USD 100 million equity investment in EE projects.

The programme will focus exclusively on smale-scale energy efficiency projects based in South Africa. These projects will incorporate three key measures designed to generate significant global environmental benefits: reducing greenhouse gas emissions, improving energy efficiency, and promoting broader adoption of energy-efficient technologies. It is projected that the programme will mitigate the release of 83 million tons of CO2 emissions, requiring an investment of around USD 500 million.

2. PROJECT BACKGROUND

PSEEP2 builds upon the foundation laid by Private Sector Energy Efficiency Programme Phase 1 (PSEEP1), which was funded by the UK DFID and executed between 2013 and 2015. The GEF Council approved the PSEEP2 project concept note (the Project Information Form – PIF) in February 2024. The implementation of the programme is led by the Development Bank of Southern Africa (DBSA) as an Implementing Agency of the GEF, whereas partner Banks will act as Executing Agencies. The South African government will be represented through the Department of Minerals Resources and Energy (DMRE) as lead government agency for the programme and the Department Forestry, Fisheries and Environment (DFFE) as the National Designated Authority (NDA) to support the programme during implementation phase and to ensure alignment of the programme with government targets and priority areas.

The programme aims to catalyse a market paradigm shift by demonstrating the commercial viability of small-scale standardized energy efficiency projects. This will encourage the continued and widespread availability of such products in the market. Additionally, the programme seeks to reduce South Africa's carbon-intensive energy demand and emissions from private sector industries, thereby helping to alter the national emissions trajectory. The project identification form (PIF) was approved by the GEF council in February 2024 (GEF ID 11064). In line with the GEF project cycle, the approval of the PIF triggers the full development of the project resulting in the drafting of the CEO Endorsement document and other supporting documents, which will be developed for the approval of the GEF Council for implementation.

3. SCOPE OF WORK

- a) Prepare the CEO Endorsement document, financial model, implementation plan and project budget
- b) Review the approved concept note and financial model

- c) Review the project feasibility study report, financial model and all other supporting documents
- d) Assist with information required for responses to the GEF Secretariat, Council and STAP comments:
- e) Engage commercial banks to gauge and secure interest to participate in the programme
- f) Conduct stakeholder consultations with commercial banks, targeted SMMEs, DMRE and other stakeholders to fully prepare the PSEEP2 programme;
- g) Draft terms of reference for the procurement of the service provider who will oversee the technical assistance component

4. DBSA ENGAGEMENT

The appointed Service Provider must engage with DBSA to develop an understanding of the following:

- The Service Provider will utilize the template for the CEO Endorsement document provided by GEF.
- The CEO Endorsement document is designed to provide a comprehensive overview of the PSEEP2 program initiative and its alignment with GEF's objectives. Its purpose is to persuade the CEO to endorse and support the project, highlighting targeted impact outcomes such as reducing greenhouse gas (GHG) emissions, enhancing energy efficiency, and promoting broader adoption of energy-efficient technologies.
